

## Why Alumina bi-fold doors?

### Strength with size

A true aluminium bi-folding door, Alumina offers superb strength and high security, with panes spanning up to 1.2m wide and 2.5m high.

### High thermal efficiency

Alumina bi-folding doors offer market-leading thermal performance for tomorrow's legislation - resulting in superb U-values as low as 1.2.

### One piece lock

An innovative, patented combined lock and thermal insert gives Alumina its high energy efficiency combined with a sleek appearance.

### Safe and secure

Alumina bi-folds include high security features such as shootbolts, anti-lift features, anti-bump cylinders and optional anti-snap cylinders.

### Fully accredited

The Alumina bi-fold has been tested to PAS24 and has achieved Secured by Design accreditation for customers' peace of mind.

### Warm touch foil finish

Aluminium is often cold to the touch - but Alumina is available with a wide range of foiled finishes, giving warmth and a beautiful appearance.

### A true aluminium bi-fold

Alumina bi-folds are manufactured using standard aluminium machinery, ensuring fabrication is easier and lead times are kept low.

### Designed by experts

In addition to foils, you can select Alumina bi-fold doors manufactured with any long-lasting powder-coated colour of your choice.

### Fully matching

Not only does the Alumina bi-fold come with foiled finishes to perfectly match Linar PVCu windows, it's the only sculptured bi-fold on the market.

### Family friendly

With three threshold options, including a Part M compliant low threshold measuring just 23.5mm high, Alumina is designed for family living.

### Guaranteed

Foiled finishes come with Linar's 10-year guarantee - and when installed with Linar windows, your customer is assured of a single point of warranty.

### Reliable supply chain

No need to deal with other manufacturers - Alumina is manufactured within Linar's existing, reliable supply chain.
